Lettings Insight Report

London Edition | June 2023

Market overview

Whilst tenant demand remains at the inflated levels we have seen for the last 18 months and the average rental price across our portfolio rose in June, price increases are slowing down. The expectation for large rent increases amongst landlords is reducing.

This might suggest that despite the supply/demand imbalance, the extraordinary rent increases of the last period are coming to an end.

The tenant location wish list is also reflecting acceptance of greater commute times, as well as WFH flexibility. This is helping spread demand over a wider area, which further takes the heat out of rental pricing.
